EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this examiner's amendment was given in a telephone interview with Sheldon Landsman, on August 29, 2006
3. The application has been amended as follows:

Claim 1, line 2, after "metallic soap", the following phrase has been added:

"which is a salt of a fatty acid having 10 or more carbon atoms".

End of Amendment.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance: None of the prior art references of record, singly or combined, teach or suggest a method of forming coated zinc oxide particles comprising mixing particles, consisting essentially zinc oxide, directly with a metallic salt and heating the mixture at a temperature equal or higher than the melting point of the metallic salt. As shown in examples of the instant specification, films containing coated zinc oxide particles formed when the heat-coating temperature is lower than the melting point, these films exhibit lower light transmittance than those containing coated zinc oxide particles made by the claimed process. The Miyoshi patent (US 4,606,914) does not

teaches C₁₀ or higher metallic soaps. Further the Miyoshi patent does not teach a mixing temperature equal or higher than the metallic soap. The Nagle patent (US 3,615,809) does not teach a mixing temperature equal or higher than the metallic soap. Similarly, the O'Brien patent (US 2,068,066), the Csonka patent (US 3,042,539) and the Brand patents (US 4,923,518) all teach a method of coating zinc oxide with metallic soaps of C₁₀ or higher. However, the mixing temperature of the mixture of the particles and the metallic soap is below the melting point of the metallic soaps. The Coulter patent (US 2,785,990) teaches coating zinc oxide particles with a metallic soap comprising heating above the melting point of the metallic soap; however, the metallic soap contains only three carbon atoms (Coulter, col. 1, lines 57-68).

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to H. T. Le whose telephone number is 571-272-1511. The examiner can normally be reached on 10:00 a.m. to 6:30 p.m., Mondays to Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carol Chaney can be reached on 571-272-1284. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
